

## A GUIDE TO GETTING STARTED WITH ATI ESSENTIALS

1

**For each bottle of ATI Essentials, combine 1 part product to 9 parts water.**

2

**Dose equal amounts of ATI Essentials based on your tank makeup:**

Few Coral; New Aquariums	5ml / 25 gallons of system volume
Low Demand (Soft Corals, Anemones)	10ml / 25 gallons of system volume
Mixed Reef (Soft, LPS, SPS)	25ml / 25 gallons of system volume
Heavy Demand (SPS, Clams)	50ml / 25 gallons of system volume

3

**Test alkalinity at the same time every day.**

The goal is to find a stable KH value that lands between 7-8.\* It does not matter if it is 7.1 or 7.9, as long as the KH value remains the same.

If your alkalinity goes up – lower dose of all 3 ATI Essentials.  
If your alkalinity goes down – raise dose of all 3 ATI Essentials.

4

**Dose and test daily until alkalinity stabilizes.**

5

**As you continue using ATI Essentials, perform a full analysis using ATI Labs every 2-3 months.**

6

**If necessary, adjust individual elements using the ATI Elements system by following your ATI Labs recommended dose.**

\*If you need assistance achieving a KH value between 7.0 and 8.0 prior to starting ATI Essentials, please email [customer care@atinorthamerica.com](mailto:customer care@atinorthamerica.com)
